

Essays on Museums and Other Subjects Connected With Natural History, By Sir William Henry Flower (Classic Reprint)

VIII PREFACE to the Newcastle-on-Tyne meeting of the Museums Association and published in the report for 1895. 2. The essays on general Biological questions treat very considerably of a subject of even wider interest, the permanence or transmutation of species, especially in its bearing upon the doctrine of evolution. It might be thought that nothing more need now be said upon this subject, but it is certain that there is still much misapprehension in relation to it; and it may be interesting to some to know the arguments which have been brought forward at various stages of the great controversy by one whose scientific life began before the publication of the Origin of Species, and to whom it has fallen to present the principal problems connected with it in various aspects and to various classes of intelligence and education. If some of the essays may not be upon the level of our present knowledge as to facts, the principal lines of thought which run through them are not materially changed by the additions made to that knowledge, and so it has been thought best to leave them as originally written, except for an occasional verbal alteration. The dates at which they were first published should, in all cases, be carried in mind. Sometimes a repetition of ideas or even of verbal expressions found elsewhere may be met with, but these have been allowed to stand, so that each essay may be complete in itself. 3. Upon the third subject, the main point of which is the advocacy of a more systematic study of Anthropology in this country, there has been, as it seems to me, less advance than in either of the other two; and in putting forth its claims for greater recognition I felt for a long time as one crying in the wilderness.
