

Excerpt from The Raw Materials for the Enamel Industry and Their Chemical Technology  
The very hearty reception accorded to his previous books - The Theory and Practice of Enamelling on Iron and Steel and The Technology of Iron Enamelling and Tinning - both in this country and in America, has led Dr. Grunwald to submit the present volume with the intention of solving many difficulties connected with Raw Materials which could not be dealt with in the above-named works. This volume appears at a psychological moment in the history of nations, when dependence upon our own resources has never been so emphasized, and deals with an industry which has developed entirely within the last twenty years, and is now of profound economic significance. When one considers that something approaching 50,000 persons find their livelihood as enamellers in German speaking countries, and that a large part of their output finds a market in England, it will be realised that the cutting off of supplies will cause a gap in kitchen economics not easy to fill. Consequently, a very lucrative industry waits the enterprise of English manufacturers. The series of three books written by Dr. Gruhiwald, who is one of the foremost experts in enamelling technology, will serve as a valuable source of information for commencing operations, and there is no reason whatever why British capital should not enter this field, since the raw materials are cheap and abundant, their chemistry is comparatively simple, and our iron trade can supply the requisite vessels for enamelling purposes. About the Publisher  
Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com)  
This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
