Our mussel fisheries, valuable as they are, might, we have no doubt, be made still more valuable by the introduction of some artificial cultivation. Our coast waters are well supplied at present with mussel seed (the free-swimming embryos), they are found year after year settling down on all sorts of suitable and unsuitable submerged objects, and many millions of them every year perish miserably for want of a little looking after. As was recommended in last years report, simple stakes (bouchots without

watling) should be erected in likely spots, not for the purpose of taking the place of the beds--which are probably better suited on the who...
