

Report on the sea fisheries and fishing industries on the Thames Estuary Volume 1

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1903 Excerpt: ...long, were of both sexes, roe and milt undeveloped, and were feeding on shrimps and small fishes. The North Sea trawlers know it as the Latchet. Boys mentions it as Tubfish in Sandwich list, which is its common name in the S. W. of England. Dover is another station, and Laver has procured it in the Blackwater. The Red Gurnard is regarded as probably the most constant habitant of the Thames mouth during winter, though it also turns up in the summer months, when the Grey species predominates. It comes into the stow-net of the whitebaiters, from 3 to 4 inches to nigh a foot long, but is also got by the shrimpers and fish trawlers. It frequents the hard ground in the Channelway, and is got from the Low-way to the Knock buoy, which is a favourite haunt. It is obtained in spawn in the fore part of the year, though irregularly. Opposite West Mersea, Blackwater, Dr. Laver has often caught this fish, where it is taken by hook as well as captured in the trawl. Like the Grey Gurnard at Leigh, Sheerness and Chatham, it does not figure much as a mercantile product; indeed, taken in the aggregate, the several Gurnards are but moderate in numbers. Bollheads--the fishermens common name for which, indiscriminately applied to every sort, is Bullrout. Father-lasher Migatory Movements and Rate of Growth of Grey Gurnard. Verms Prof. Mcintosh, F.R.S., vol. on The Resources of the Sea, Lond. 1889. As side issue pamphlets, Trawling and Trawling Investigations, Banff, 1899, and Reply to same, &c., Aberdeen, 1899. Without entering into the merits and demerits of the case--like the hard-worded argument and facts of the (brain) hippocampus question between
