

Statistics and Problem Solving: Computer-based Case Studies from the STEPS Project Including CD-ROM (Arnold Publication)

This collection of software is designed to assist instructors who are using the STEPS computer aided learning software, and it emphasizes applications in geography, psychology, and biology. The basic approach of the STEPS software is to teach statistical principles through carefully constructed problems. Assembled by two leaders in the field, this collection includes a CD-ROM with software routines and has been extensively tested in undergraduate laboratories, where the software is proving extremely popular.
