

The Arctic can be viewed as an integrated system, intimately linked by its atmosphere, ocean and land. This comprehensive, up-to-date assessment begins with an outline of early Arctic exploration and the growth of modern research. Using an integrated systems approach, subsequent chapters examine the atmospheric heat budget and circulation, the surface energy budget, the hydrologic cycle and interactions between the ocean, atmosphere and sea ice cover. Reviews of recent directions in numerical modeling and the characteristics of past Arctic climates cover recent climate variability as well as projected future trends.

New Public Personnel Administration, Our Unprotected Heritage: Whitewashing the Destruction of our Cultural and Natural Environment, Intermediate Algebra: A Just-in-Time Approach (with Greatest Hits CD), Essential Methods in Business Statistics, Taxidermy and sculpture: The work of Carl E. Akeley in Field Museum of Natural History,
