

The Molecular Rearrangement of Triarylhydroxylamines and the Beckmann Rearrangement of Ketoximes: A Color Reaction of Hypochlorites With Methylaniline and Ethylaniline (Classic Reprint)

Excerpt from The Molecular Rearrangement of Triarylhydroxylamines and the Beckmann Rearrangement of Ketoximes: A Color Reaction of Hypochlorites With Methylaniline and Ethylaniline Holmann, Ben, 15, 412 Dry salts of the acid halogen amides decompose, when warmed, forming isocyanates (unpublished work of Stieglitz and O. Eckstein, 1905) About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
